

GEOfoam **APPLICATIONS**

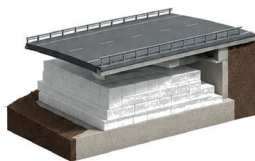

Road construction and widening

Reduces traffic loads and settlement. Ideal for embankments, fills and subsoil stabilisation.

Retaining walls

Lightweight backfill material behind retaining walls. Relieves the structure and increases structural and operational safety.

Bridge abutments

Reduces the load on the structure and subsoil. For durable, stable and safe constructions.

Protecting buried structures

Protects pipes, shafts and structures through lightweight cover and even load distribution.

Landscaping and green roofs

Enables creative terrain modelling and green roof areas with minimal weight.

Levees and noise control

A lightweight, stable solution for embankments and noise barriers with high long-term durability.
